Accelerated Life Models: Modeling and Statistical Analysis

Vilijandas Bagdonavicius, Mikhail Nikulin

Accelerated Life Models: Modeling and Statistical Analysis Vilijandas Bagdonavicius, Mikhail Nikulin The authors of this monograph have developed a large and important class of survival analysis models that generalize most of the existing models. In a unified, systematic presentation, this monograph fully details those models and explores areas of accelerated life testing usually only touched upon in the literature.

Accelerated Life Models: Modeling and Statistical Analysis presents models, methods of data collection, and statistical analysis for failure-time regression data in accelerated life testing and for degradation data with explanatory variables. In addition to the classical results, the authors devote considerable attention to models with time-varying explanatory variables and to methods of semiparametric estimation. They also examine the simultaneous analysis of degradation and failure-time data when the intensities of failure in different modes depend on the level of degradation and the values of explanatory variables.

The authors avoid technical details by explaining the ideas and referring to resources where thorough analysis can be found. Whether used for teaching, research or general reference, Accelerated Life Models: Modeling and Statistical Analysis provides new and known models and modern methods of accelerated life data analysis.

From reader reviews:

Nathan Marker:

Information is provisions for folks to get better life, information today can get by anyone in everywhere. The information can be a knowledge or any news even a huge concern. What people must be consider while those information which is in the former life are challenging to be find than now is taking seriously which one is acceptable to believe or which one typically the resource are convinced. If you obtain the unstable resource then you understand it as your main information there will be huge disadvantage for you. All of those possibilities will not happen within you if you take Accelerated Life Models: Modeling and Statistical Analysis as your daily resource information.

Elaine Gold:

Reading a e-book can be one of a lot of action that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people enjoyed. First reading a reserve will give you a lot of new facts. When you read a book you will get new information since book is one of numerous ways to share the information or their idea. Second, looking at a book will make anyone more imaginative. When you reading through a book especially fiction book the author will bring someone to imagine the story how the people do it anything. Third, you could share your knowledge to some others. When you read this Accelerated Life Models: Modeling and Statistical Analysis, you can tells your family, friends as well as soon about yours book. Your knowledge can inspire average, make them reading a book.

Brent Whitty:

Spent a free a chance to be fun activity to complete! A lot of people spent their sparetime with their family, or their very own friends. Usually they performing activity like watching television, going to beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Do you need to something different to fill your free time/ holiday? Could possibly be reading a book may be option to fill your no cost time/ holiday. The first thing that you ask may be what kinds of reserve that you should read. If you want to try look for book, may be the e-book untitled Accelerated Life Models: Modeling and Statistical Analysis can be very good book to read. May be it is usually best activity to you.

Jamila Coles:

Is it an individual who having spare time then spend it whole day simply by watching television programs or just lying down on the bed? Do you need something totally new? This Accelerated Life Models: Modeling and Statistical Analysis can be the respond to, oh how comes? It's a book you know. You are therefore out of date, spending your time by reading in this brand-new era is common not a geek activity. So what these guides have than the others?
